New

New.csv

Starred in Android

Freeman.jpg

Starred in Android.csv

Data included

Contacts and contact photos you added yourself, as well as contacts saved from your interactions in Google products like Gmail.

Folder structure

Now that you've downloaded the contacts from your Google Account, you'll find folders named "My Contacts" and "All Contacts," plus additional folders if you created any labels, or starred contacts on your Android device. The "My Contacts" folder contains only those contacts you added yourself. The "All Contacts" folder contains both contacts you added yourself as well as contact info automatically saved from your interactions in Google products, like Gmail.

How to handle this export

If you downloaded your contacts as a CSV file, you can view them in a spreadsheet, or import them to Microsoft Outlook or another Google Account. If you downloaded your contacts as a vCard file, you can import them to another Google Account, Mac OS, iOS, or other contacts services.

You're in control of your data in Contacts

Review your data

You can review contacts you've added to your Google Account in Contacts

Manage your data

You can delete contacts from your Google Account in Contacts

Control your data

Go to Gmail settings to control whether contacts are created for auto-complete.Go to your Google Account to control whether contact info is saved when you interact with people in other Google products.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Contacts

CSV
For importing to MS Outlook or another Google Account

vCard
A common file format for electronic business cards used by programs such as Gmail, Microsoft Outlook, and Mac OS X contacts.

Crisis User Reports

0 files exported successfully

No data found

Data included

Information provided to help others during crises

Folder structure

One folder that will contain a single CSV file.

You're in control of your data in Crisis User Reports

Manage your data

Delete your data

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Yes/no questions

Answers to yes/no user-report questions related to crises.

CSV

Data Shared for Research

0 files exported successfully

About this export

Exported files

File formats

No data found

Data included

Responses saved with your Google Account from your participation in Google research studies and projects.

Folder structure

One folder will be included in the export for each selected research project or app to which you've donated data.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Crowdsource donated images

For Crowdsource donated images, you'll receive a collection of image files for each image you donated.

JPG

Images will be exported as JPG.

Crowdsource donated labels

For Crowdsource donated labels, you'll receive a collection of text files for each image you donated.

TXT

Associated labels will be exported as TXT.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Documents

PDF

RTF
A common text file format that supports text formatting, images and objects.

ODT
A text document created by various word processors, such as the Writer program included in Apache OpenOffice and LibreOffice.

DOCX
A document created by Microsoft Word or another word processing program.

TXT

Drawings

PDF

JPG

PNG

SVG
A standard format for displaying vector graphics on the web.

Forms

PDF

XLSX
An Excel spreadsheet created by Microsoft Excel or another spreadsheet program.

ODS
A spreadsheet created by the Calc program included with the Apache OpenOffice suite.

Presentations

PDF

ODP
A presentation created by Impress, a presentation editing application included with Apache OpenOffice.

PPTX
A presentation file created by Microsoft PowerPoint or another presentation program.

PNG

TXT

Spreadsheets

PDF

XLSX
An Excel spreadsheet created by Microsoft Excel or another spreadsheet program.

ODS
A spreadsheet created by the Calc program included with the Apache OpenOffice suite.

Uploads
Files you have uploaded to Google Drive.

Original uploaded format.

Fit
0 files exported successfully

About this export

Exported files

File formats

No data found

Data included

Your Google Fit activity data.

Folder structure

By default, Fit samples location data with low accuracy and frequency to reduce device battery consumption. Activities recorded with Fit's active mode will contain more detailed location paths and more accurate data.

More options to manage your privacy

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Activities

Your activity recordings.

TCX
A common file format for fitness activity data that can be imported to many fitness tracking tools such as Garmin Connect and Strava.

Daily Aggregations
Your daily activity aggregations.

CSV
Fields in your daily aggregation files will include: Start time, End time, Calories (kcal), Distance (m), Average heart rate (bpm), Max heart rate (bpm), Min heart rate (bpm), Low latitude (deg), Low longitude (deg), High latitude (deg), High longitude (deg), Average speed (m//s), Max speed (m//s), Min speed (m//s), Step count, Average weight (kg), Max weight (kg), Min weight (kg), Move Minutes count, Heart Points, Inactive duration (ms), Walking duration (ms)

All Data
A full dump of your Fit data partitioned by the source.

JSON

Sessions
A record of your activity sessions.

JSON

Fusion Tables

0 files exported successfully

About this export

Exported files

File formats

Google Account

Manage your info, privacy, and make Google work better for you

Below are all the possible formats you could have received in your archive:

Location History

Location data collected while opted-in to Location History.

JSON

The JSON Location History file describes device location signals and associated metadata collected while you were opted into Location History which you have not subsequently deleted.

- locations: All location records.
  - timestampMs(int64): Timestamp (UTC) in milliseconds for the recorded location.
  - latitudeE7(int32): The latitude value of the location in E7 format (degrees multiplied by 10**7 and rounded to the nearest integer).
  - longitudeE7(int32): The longitude value of the location in E7 format (degrees multiplied by 10**7 and rounded to the nearest integer).
  - accuracy(int32): Approximate location accuracy radius in meters.
  - velocity(int32): Speed in meters per second.
  - heading(int32): Degrees east of true north.
  - altitude(int32): Meters above the WGS84 reference ellipsoid.

- verticalAccuracy(int32): Vertical accuracy calculated in meters.
- activity: Information about the activity at the location.
- timestampMs(int64): Timestamp (UTC) in milliseconds for the recorded activity.
- type: Description of the activity type.
- confidence(int32): Confidence associated with the specified activity type.

KML

A KML file stores geographic modeling information in XML format that can be used to display geographic data. Refer to the kml documentationfor more information. You can load your KML file into Google Earth to view all the locations you have visited.

Semantic Location History

Semantic location history consisting of inferred place visits and activity segments.

JSON

The JSON Semantic Location History file(s) describe Google Timeline objects such as inferred place visits and activity segments between place visits.

Data that are still in the process of being deleted are not included in your archive. Learn more about your deleted data.

All mail Including Spam and Trash.mbox

Data included

All of the messages and attachments in your Gmail account in MBOX format.

Folder structure

By default, we provide all of your mail in a single mbox file. Alternatively, you can choose labels to export, each of which will be contained in its own mbox file. When you export your mail from Gmail, each message's labels are preserved in a special X-Gmail-Labels header, in CSV format. While no mail client recognizes this header now, most mail clients allow for extensions to be written that could make use of this data.

How to handle this export

For more information about importing mboxes into your favorite mail client, here are some non-Google tutorials for Thunderbird and Apple Mail.

You're in control of your data in Mail

Review your data

You can review your mailbox in the Gmail UI.

Manage your data

You can delete your entire Gmail account by following this help article. You can delete individual messages in the Gmail UI.
